

Rental/Sales Inventory

Last Modified on 16/02/2022 2:20 pm EST

Inventory Setup/Modification

RentalPoint uses an **Inventory Treeview** structure (Fig A below) to organize and manage the inventory your company will make available for Rental or Sale. Inventory **must be entered here** before it can be added to the equipment grid of a booking.

- Access the Product Setup/Management options via the gear icon  on the products menu (Fig B below) or via right click option on the Products page (Fig C below)
- Refresh the page using the  option
- Collapse the Inventory Tree using the  option
- **Add New or Edit/Delete Existing Rental/Sale Inventory**
- Duplicate Rental/Sales/Labour Products
- **Move items in Inventory via Drag and Drop**
- Find Products/Assets
- Change Prices for some/all inventory items
- Product Listing
- Asset Listing

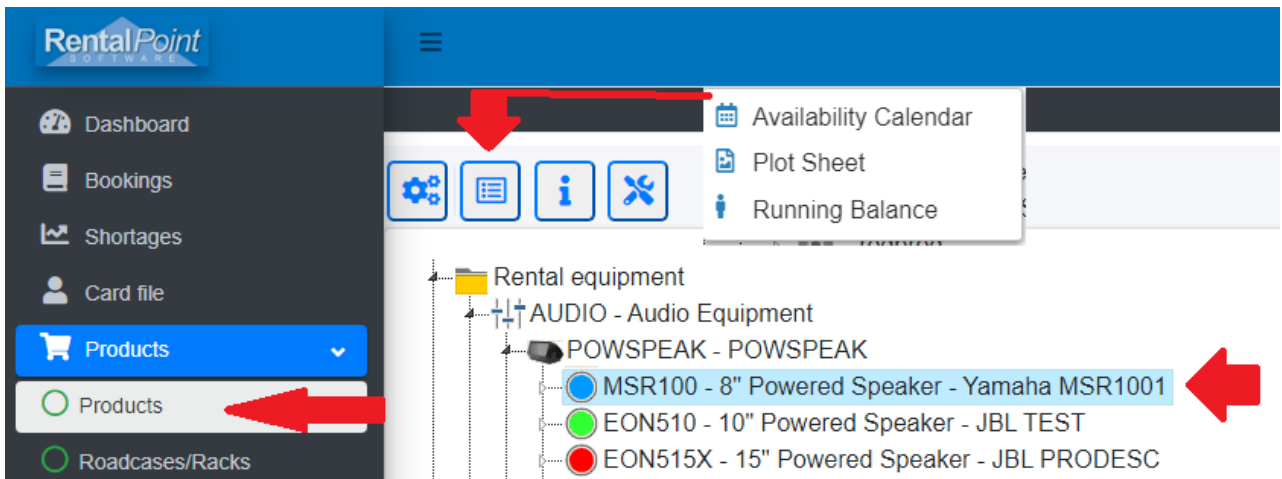

The screenshot displays the RentalPoint software interface. On the left is a dark sidebar menu with options: Dashboard, Bookings, Shortages, Card file, Products (selected), Roadcases/Racks, Maintenance, Venues, Schedule, Purchase Orders, Action Lists, and Contacts. The main content area has a top navigation bar with 'Reports', 'Assets', 'Setup', 'Others', and 'Help'. Below this is a toolbar with icons for settings (gear), list, info, and edit. The central part shows a treeview structure with folders: Rental equipment, Sales and Disposables, Labor Products, and Technicians. A red arrow points from the gear icon to a 'Setup Products' dropdown menu with options: View, Product, Maintenance, Reports, and Refresh. Another red arrow points from the treeview to a vertical stack of blue buttons: Refresh, Collapse, New, Properties, Delete, Duplicate, Find, Change Prices, Product listing, and Asset Listing. A third red arrow points from the 'Products' menu item in the sidebar to the same button stack. Labels 'Fig A. Treeview Structure', 'Fig B. Product Setup/Management', and 'Fig. C right click option' are placed near their respective elements.

Product Availability & Usage

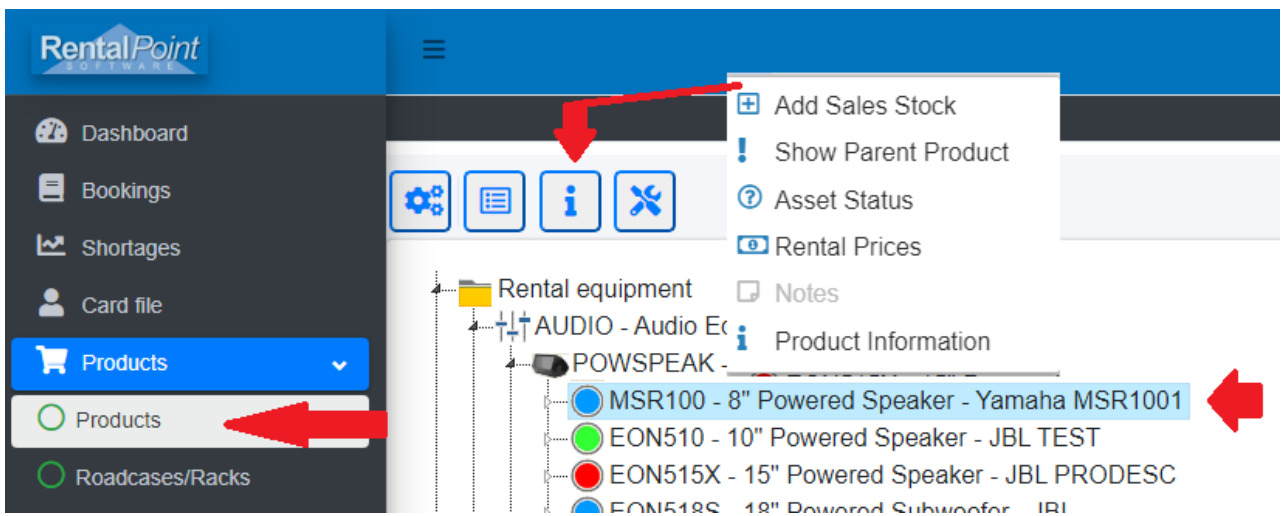

Explore where and when your products are being used via **Availability Calendar**, **Plot Sheet** and **Running Balance**.

For Multi-Location systems, **Availability at All Locations** may also be viewed
